ФАКУЛТЕТ ЗА ИНФОРМАТИЧКИ НАУКИ И КОМПЈУТЕРСКО ИНЖЕНЕРСТВО

Аудиториски вежби 6

Интернет програмирање

Иван Китановски

Бојан Илијоски

Влатко Спасев

Објекти во JavaScript

Објект	Атрибути	Методи
	car.name = Fiat car.model = 500 car.weight = 850kg car.color = white	car.start() car.drive() car.brake() car.stop()

Објекти во JavaScript (2)

- Објектите се променливи кои чуваат повеќе вредности

```
let car = {type:"Fiat", model:"500",
color:"white"};
```

Објекти во JavaScript (3)

- Пристап до атрибутите на објектот

```
objectName.propertyName
        или
objectName[“propertyName”]
```

- Пристап до методите на објектот

```
objectName.methodName()
```

- Доколку се пристапи до методот без (), тогаш се враќа дефиницијата на функцијата

```
let f = objectName.methodName;
```

Објекти во JavaScript (4)

Конструктор функција

```
function Person(first, last, age, eyecolor) {
    this.firstName = first;
    this.lastName = last;
    this.age = age;
    this.eyeColor = eyecolor;
    this.name = function() {
        return this.firstName + " " + this.lastName;};
}

let person = new Person("John", "Doe", 50, "blue");
```

Додавање на нов атрибут/метод

```
person.nationality = "English";
Person.getAge = function() {return this.age;};
```

Пример 1

```
let myObj = new Object(),
    str = 'myString',
    rand = Math.random(),
    obj = new Object();

myObj.type              = 'Dot syntax';
myObj['date created']   = 'String with space';
myObj[str]              = 'String value';
myObj[rand]             = 'Random Number';
myObj[obj]              = 'Object';
myObj['']               = 'Even an empty string';

console.log(myObj);

//{type: "Dot syntax", date created: "String with space", myString: "String
value", 0.4700474686907987: "Random Number", [object Object]: "Object", …}
```

Пример 2

```
// Animal properties and method encapsulation
let Animal = {
  type: 'Invertebrates', // Default value of properties
  displayType: function() {  // Method which will display type of Animal
    console.log(this.type);
  }
};

// Create new animal type called animal1
let animal1 = Object.create(Animal);
animal1.displayType(); // Output:Invertebrates

// Create new animal type called Fishes
let fish = Object.create(Animal);
fish.type = 'Fishes';
fish.displayType(); // Output:Fishes
```

Getters and Setters

```
let o = {
  a: 7,
  get b() {
    return this.a + 1;
  },
  set c(x) {
    this.a = x / 2;
  }
};

console.log(o.a); // 7
console.log(o.b); // 8
o.c = 50;
console.log(o.a); // 25
```

Deleting properties

```
// Creates a new object, myobj, with two properties, a and b.
let myobj = new Object;
myobj.a = 5;
myobj.b = 12;

// Removes the a property, leaving myobj with only the b property.
delete myobj.a;
console.log ('a' in myobj); // yields "false"
```

Comparing Objects

```
// Two variables, two distinct objects with the same properties
let fruit = {name: 'apple’};
let fruitbear = {name: 'apple'};

fruit == fruitbear; // return false
fruit === fruitbear; // return false

// Two variables, a single object
let fruit = {name: 'apple’};
let fruitbear = fruit;  // assign fruit object reference to fruitbear

// here fruit and fruitbear are pointing to same object
fruit == fruitbear; // return true
fruit === fruitbear; // return true

fruit.name = 'grape';
console.log(fruitbear);    // yields { name: "grape" } instead of { name: "apple" }
```

Потсетување

```
let num = 0;
let obj = new String('0’);
let str = '0';

console.log(num == num); // true
console.log(obj == obj); // true
console.log(str == str); // true

console.log(num == obj); // true
console.log(num == str); // true
console.log(obj == str); // true
console.log(null == undefined); // true

// both false, except in rare cases
console.log(obj == null);
console.log(obj == undefined);
```

Креирање објекти - Object Literals

```
// This is an empty object initialized using the object literal
notation
let myBooks = {};

// This is an object with 4 items, again using object literal
let mango = {
        color: "yellow",
        shape: "round",
        sweetness: 8,

        howSweetAmI: function () {
                console.log("Hmm Hmm Good");
        }
}
```

Креирање објекти - Object Constructor

```
let mango =  new Object ();
mango.color = "yellow";
mango.shape= "round";
mango.sweetness = 8;

mango.howSweetAmI = function () {
     console.log("Hmm Hmm Good");
}
```

Креирање објекти - Constructor Pattern

```
function Fruit (theColor, theSweetness, theFruitName, theNativeToLand) {

    this.color = theColor;
    this.sweetness = theSweetness;
    this.fruitName = theFruitName;
    this.nativeToLand = theNativeToLand;

    this.showName = function () {
        console.log("This is a " + this.fruitName);
    }

    this.nativeTo = function () {
        this.nativeToLand.forEach(function (eachCountry)  {
                console.log("Grown in:" + eachCountry);
        });
    }
}
```

Креирање објекти - Prototype Pattern

```
function Fruit () {

}

Fruit.prototype.color = "Yellow";
Fruit.prototype.sweetness = 7;
Fruit.prototype.fruitName = "Generic Fruit";
Fruit.prototype.nativeToLand = "USA";

Fruit.prototype.showName = function () {
        console.log("This is a " + this.fruitName);
}

Fruit.prototype.nativeTo = function () {
            console.log("Grown in:" + this.nativeToLand);
}
```

Печатење на полиња

```
// Create a new school object with 3 own properties: schoolName,
schoolAccredited, and schoolLocation.
let school = {schoolName:"MIT", schoolAccredited: true,
schoolLocation:"Massachusetts"};

//Use of the for/in loop to access the properties in the school
object
for (let eachItem in school) {
        // Prints schoolName, schoolAccredited, schoolLocation
        console.log(eachItem);
}
```

Печатење на својства

```
function HigherLearning () {
        this.educationLevel = "University";
}

// Implement inheritance with the HigherLearning constructor
let school = new HigherLearning ();
school.schoolName = "MIT";
school.schoolAccredited = true;
school.schoolLocation = "Massachusetts";

//Use of the for/in loop to access the properties in the school object
for (let eachItem in school) {
        console.log(eachItem); // Prints educationLevel, schoolName,
                               //schoolAccredited, and schoolLocation
}
```

Computed properties

```
let fruit = prompt("Which fruit to buy?", "apple");

let bag = {
  [fruit]: 5, // the name of the property is taken from the variable fruit
};
alert( bag.apple ); // 5 if fruit="apple"

//same with
let bag = {};
// take property name from the fruit variable
bag[fruit] = 5;
```

Задача 1

- Напишете JavaScript програма која ќе ги прикаже сите атрибути на даден објект

Влез:

```
let student = {
        name : "David Rayy",
        sclass : "VI",
        rollno : 12
};
```

Излез:

```
name,sclass,rollno
```

Решение

```
function _keys(obj) {
    if (!isObject(obj)) return [];
    // return Object.keys(obj);
    let keys = [];
    for (let key in obj) keys.push(key);
    return keys;
}

function isObject(obj) {
    let type = typeof obj;
    return type === 'function' || type === 'object' && !!obj;
}

console.log(_keys({red: "#FF0000", green: "#00FF00", white: "#FFFFFF"}));
```

Задача 2

- Напишете JavaScript програма која ќе го избрише атрибутот rollno од следниот објект

```
let student = {
        name : "David Rayy",
        sclass : "VI",
        rollno : 12
};
```

Решение

```
let student =  {
  name : "David Rayy",
  sclass : "VI",
  rollno : 12
};

console.log(student);

delete student.rollno;

console.log(student);
```

Задача 3

- Напишете JavaScript програма која во конзола ќе ги испечати податоците за следните објекти (книга, автор и статус)

```
let library = [
    {
        author: 'Bill Gates',
        title: 'The Road Ahead',
        readingStatus: true
    },
    {
        author: 'Steve Jobs',
        title: 'Walter Isaacson',
        readingStatus: true
    },
    {
        author: 'Suzanne Collins',
        title:  'Mockingjay: The Final Book of The Hunger Games',
        readingStatus: false
    }];
```

Решение

```
let library = [
    {
        title: 'Bill Gates',
        author: 'The Road Ahead',
        readingStatus: true
    },
    {
        title: 'Steve Jobs',
        author: 'Walter Isaacson',
        readingStatus: true
    },
    {
        title: 'Mockingjay: The Final Book of The Hunger Games',
        author: 'Suzanne Collins',
        readingStatus: false
}];

for (let i = 0; i < library.length; i++) {
    let book = "'" + library[i].title + "'" + ' by ' + library[i].author + ".";
    if (library[i].readingStatus) {
      console.log("Already read " + book);
    } else {
     console.log("You still need to read " + book);
    }
}
```

Задача 4

- Напишете JavaScript функција која ќе трансформира објект во листа од `[key,value]` парови

Влез:

```
{red: "#FF0000", green: "#00FF00", white: "#FFFFFF"}
```

Излез:

```
[["red", "#FF0000"], ["green", "#00FF00"], ["white", "#FFFFFF"]]
```

Решение

```
function key_value_pairs(obj) {
    let keys = _keys(obj);
    let length = keys.length;
    let pairs = Array(length);
    for (let i = 0; i < length; i++) {
      pairs[i] = [keys[i], obj[keys[i]]];
    }
    return pairs;
}

function _keys(obj) {
    if (!isObject(obj)) return [];
    // return Object.keys(obj);
    let keys = [];
    for (let key in obj) keys.push(key);
    return keys;
}

function isObject(obj) {
    let type = typeof obj;
    return type === 'function' || type === 'object' && !!obj;
}

console.log(key_value_pairs({red: "#FF0000", green: "#00FF00", white: "#FFFFFF"}));
```

Задача 5

- Напишете JavaScript програма која ќе пресметува периметар и плоштина на круг.

- Забелешка: Креирајте два методи за периметар и плоштина. Радиусот ќе биде даден како влез од корисникот

Решение

```
function circle(radius) {
    this.radius = radius;
    this.area = function () {
        return Math.PI * this.radius * this.radius;
    };
    this.perimeter = function () {
        return 2 * Math.PI * this.radius;
    };
}

let c = new circle(3);

console.log('Area =', c.area().toFixed(2));
console.log('perimeter =', c.perimeter().toFixed(2));
```

Задача 6

- Напишете JavaScript програма која ќе прикаже работа на часовник.

Излез

```
"14:37:42"
"14:37:43"
"14:37:44"
"14:37:45"
"14:37:46"
"14:37:47"
```

Решение

```
function my_Clock() {
  this.cur_date = new Date();
  this.hours = this.cur_date.getHours();
  this.minutes = this.cur_date.getMinutes();
  this.seconds = this.cur_date.getSeconds();
}
my_Clock.prototype.run = function () {
  setInterval(this.update.bind(this), 1000);
};
my_Clock.prototype.update = function () {
  this.updateTime(1);
  console.log(this.hours + ":" + this.minutes + ":" + this.seconds);
};
my_Clock.prototype.updateTime = function (secs) {
  this.seconds+= secs;
  if (this.seconds >= 60) {
     this.minutes++;
     this.seconds= 0;
  }
  if (this.minutes >= 60) {
     this.hours++;
     this.minutes=0;
  }
  if (this.hours >= 24) {
     this.hours = 0;
  }
};

let clock = new my_Clock();
clock.run();
```
