

# Web Typography

# Typography

The visual design of the written word

# Typography

For the benefit of the reader, not the writer.

Writer

High attention span

High interest in topic

Reader

Low attention span

Medium-low interest in topic

# Typography

Good typography counteracts low attention spans by creating interesting and pleasing looking content for the reader.

Most readers are looking for reasons to stop reading

# Typography

Good typography reinforces the meaning and purpose of the text

# Typography

# Typography

# Anatomy of a typeface

## Glossary of terms

01 APERTURE	20 HAIRLINE (stroke)
02 APEX	21 HEAD SERIF
03 ARC	22 JOINT
04 ARM	23 LEG
05 ASCENDER	24 LIGATURE
06 AXIS	25 LINK/NECK
07 BEAK	26 LOOP
08 BILATERAL SERIF	27 OVERHANG
09 BOWL	28 SERIF
10 BRACKET	29 SHOULDER
11 COUNTER (open)	30 SPINE
12 COUNTER (closed)	31 SPUR
13 CROSSBAR	32 STEM
14 CROTCH	33 STRESS

# Legibility & Readability

- Legibility – recognition of individual letter forms and their relative position to other letters
- Readability – how the typography is presented to the viewer as words, lines and paragraphs

This is Tisa. It's an example of a serif typeface suitable for longer passages of text.

As you can see, it's readable at smaller sizes.

This is Proxima Nova Regular. It's an example of a sans-serif typeface suitable for longer passages of text.

It's also readable at smaller sizes.

Legibility	Arial seems easy enough to understand	WHEREAS MESQUITE POSES A BIT OF A CHALLENGE
Readability	You'll want to use type that's comfortable like	Not Letter Gothic as it might be harder to read
Content	<b>Impact for a Headline</b>	<b>Not forcing impact by lumping together important, wordy information. Unless you don't like happy subscribers.</b>
Context	Times New Roman for financial matters	Comic Sans for financial matters? Let's not, ever.

# Typeface vs. Font?

Helvetica

Helvetica.ttf

# For the Web

## System Fonts (Web Safe Fonts)

### Sans-serif

- Arial, Calibri, Helvetica, Verdana

### Serif

- Times New Roman, Georgia, Lucida, Cambria

### Monospace

- Courier New, Lucida Sans Typewriter

### Fantasy

- Impact, Copper Plate, Papyrus (Don't use unless your building a website for a Yoga Studio)

### Cursive

- Brush Script Std, Comic Sans (Don't use unless you want to fail the class)

Serif

Times New Roman

Sans-Serif

Arial Typeface

Monospace

Courier New

Courier New

# Fantasy

# Papyrus

Cursive

Brush Script

*Comic Sans* (Seriously... don't use this font...)

# Font-Family

```
body{  
  font-family: helvetica, arial, sans-serif;  
}
```

## Pros:

- No licensing
- Easy to use

## Cons:

- Limited choices
- Fonts must be installed on users computer
- User control over your design

# Contrast

# Helvetica

# Bodoni

Higher contrast fonts tend to be better suited for short lengths of text because they can be burdensome to read in longer spans...

# Weight

100	Thin
200	Light
300	Book
400	Regular
500	Medium
600	DemiBold
700	<b>Bold</b>
800	<b>ExtraBold</b>
900	<b>Heavy</b>

# Weight

```
body{  
    font-family:helvetica, arial, sans-serif;  
    font-weight:800;  
}
```

Not all typefaces have every weight option available

# Font Size

h3 18px		h3 133%		h3 1.125em
body 16px		body 100%		body 100%
				p 1em

# @Font-Face

```
@font-face {  
    font-family: myUniqueFontName;  
    src: url(fonts/myUniqueFontFile.ttf);  
}
```

```
body{  
    font-family: myUniqueFontName;  
}
```

# Case

- lowercase letters are more readable than UPPERCASE letters
- UPPERCASE EMPHASIZES LETTER TO LETTER RECOGNITION (SLOWS DOWN READING)

FOR EXAMPLE, IT DOESN'T MATTER IN  
WHAT ORDER THE LETTERS IN A WORD  
APPEAR, THE ONLY IMPORTANT THING IS  
THAT THE FIRST AND LAST LETTER ARE  
IN THE RIGHT PLACE. THE REST CAN BE  
A TOTAL MESS AND YOU CAN STILL  
READ IT WITHOUT PROBLEM.

For example, it doesn't matter in what order the letters in a word appear; the only important thing is that the first and last letter are in the right place. The rest can be a total mess and you can still read it without problem.

# Attention to details

The difference between “just okay” typography and professional level typography is usually in the details. Many times, simply typing in the text and formatting the font, size and line spacing is enough. However, depending on the design, some extra attention may be needed. Larger type sizes may need adjustments to the space between the characters, and paragraphs need to be adjusted to eliminate “widows” and “orphans.”

# Ligatures

- ***Standard ligature*** combines two or three characters into a single character. This type of ligature helps with the kerning when some characters take over the horizontal space of the next character.
- ***Discretionary ligatures*** tend to be decorative. These ligatures also combine two or three characters into a single graceful character design.
- ***Contextual ligatures*** are subtle and are used for rhythm, color and beauty.
- Ligatures need to be used carefully as they can look very obvious if your text contains wide letter spacing.

# Ligatures

## Glossary of terms

### 01 STANDARD LIGATURES

Most professional typefaces feature Standard Ligatures. Always turn these ligatures on by default as it improves readability and fixes obtrusive elements such as the terminal of **f** coming too close to or even overlapping the tittle (the dot) of **i**.

### 02 DISCRETIONARY LIGATURES

Discretionary Ligatures are decorative ligatures. They provide more interesting and professional typography but at text size these can be rather obtrusive. For this reason you generally won't find discretionary ligatures in books.

### 03 CONTEXTUAL LIGATURES

Contextual Ligatures are very subtle and typographically most advanced. In fact most professional typefaces don't even feature contextual ligatures. If your typeface does have them though, use them! Contextual ligatures improve the rhythm and provide a more even color, making the text more pleasant to read.

### TYPEFACES USED

Gotham

By Martin Brundage

# character spacing - **kerning**

- Kerning is the space between each character or letter. Sometimes this space needs to be adjusted in order to create a more pleasing look to the text. Most programs apply kerning automatically, but there are certain letter combinations that may require manual kerning.

# character spacing - **kerning**

AWE

No Kerning

AWE

Automatic Kerning

AWE

Manually Adjusted

type looks better with kerning!

Watermelon

Watermelon

# word spacing - **tracking**

- The adjustment of word spacing is called tracking. It is similar to kerning but refers to the space between words instead of characters. It's main purpose is to make type fit a required space without altering the type size or line spacing. Tracking can be either negative (making the words closer together) or positive (making the words farther apart)

# word spacing - **tracking**

Tracking at 400 T R A C K I N G I S A D E S I G N T O O L

Tracking at 100 TRACKING IS A DESIGN TOOL

Tracking at 0 TRACKING IS A DESIGN TOOL

Tracking at -50 TRACKING IS A DESIGN TOOL

Tracking at -100 TRACKING IS A DESIGN TOOL

# line spacing - **leading**

- Leading, or line spacing, refers to the amount of space between lines of type. The amount of leading you use will be determined based on the font used, the line length, and the size of the type. The larger the type, the more leading you will need.

# line spacing - **leading**

24 / 24

this is an example of  
size 24 type with a  
leading of 24 pt.

36 / 24

this is an example of  
size 36 type with a  
leading of 24 pt.

24 / 36

this is an example of  
size 24 type with a  
leading of 36 pt.

24 / 24

this is an example of  
size 36 type with a  
leading of 36 pt.

# paragraph spacing - **alignment**

- Alignment refers to the way the lines of text flow on a page. Most text is aligned left, as this is how we are used to reading it. In some cases, we may want to use other alignments in order to add to the design quality of a project.

# paragraph spacing - **alignment**

## **align left**

This text is aligned left  
so that the sentences  
always line up on the  
left side

## **align center**

This text is centered  
so that the sentences  
always line up on  
top of one another

## **align right**

This text is aligned right  
so that the sentences  
always line up on the  
right side

## **justified**

This text is justified  
so that there is a  
straight edge on  
both sides. In order  
to do this you will  
have to use tracking

# paragraph spacing - **line breaks** **& rag**

- In typography, “rag” refers to the irregular or uneven vertical margin of a block of type. Usually it’s the right margin that’s ragged but either or both margins can be ragged. Pay attention to the shape that the ragged line endings make. A good rag goes in and out from line to line in small increments. A poor rag creates distracting shapes of white space in the margin.
- Don’t rely on the line breaks generated by your software application; get in the habit of spotting and correcting poor rags by making manual line breaks or by editing your copy.

# paragraph spacing - line breaks & rag

bad rag

Not many days after we heard the church-bell tolling for a long time, and looking over the gate we saw a long, strange black coach that was covered in black cloth and was drawn by black horses; after that came another and another and another, and all were black, while the bell kept tolling, tolling.

good rag

## Pros:

- Unique fonts in normal text state
- Easy to set up
- No risk of copyright infringement

## Cons:

- If the service goes down, fonts will not work
- \$\$\$

# Font Pairing

<http://fontpair.co/>

<https://designschool.canva.com/blog/the-ultimate-guide-to-font-pairing/>

<https://www.canva.com/font-combinations/>

# Essential Typography Rules

Font Size Between 12-32px or .75-2em

FigCaption text and other similar elements are the only things that should be 12px / .75em

Body text should be between 14-18px / .875 – 1.125em

font-size:1em;

# Essential Typography Rules

Default line height is 110-120% in most browsers.

110-150% for body text is recommended

Line-height:100%;

# Essential Typography Rules

Opinions vary, but the average length of a line of text in HTML should range somewhere in between 50-90 characters (including spaces)

# Essential Typography Rules

Avoid goofy fonts, as well as Papyrus and *Comic Sans*

Keep body and paragraph typefaces simple

More decorative fonts should only be used for headings

# Essential Typography Rules

Only underline links, nothing else

If you choose not to underline links, they should stand out in some other way such as color or weight

Don't make links bigger than the rest of the text in a line.

# Essential Typography Rules

Strong and Emphasis text only when needed

All caps only in headings (if at all)

Center align text sparingly

Never center align lengthy blocks of content

# Essential Typography Rules
